HOW THE 2-STEP SYSTEM WORKS

The proven biological solution against red poultry mites – resistance-proof, biocide-free and approved for organic farming.

STEP 1 — ADELE MITE-FREE®

Fill into a hand sprayer and apply directly onto mite hotspots and nests. ADELE blocks the mites' breathing openings – they suffocate immediately and eggs are damaged.

Repeat every 4–12 days depending on infestation. Ideally also applied before stable cleaning.

STEP 1

STEP 2 — GUSTAV MITE STOP®

After ADELE has dried, apply GUSTAV Mite Stop® to walkways, perch resting areas, cracks and hiding spots. This hygroscopic gel forms an insurmountable barrier that does not dry out.

Remaining mites can no longer reach the chickens at night and die on contact.

STEP 2

KEY ADVANTAGES

- ✓ Immediate mite reduction
- ✓ Usable during ongoing operations – no downtime
- ✓ 100% biocide-free & odour-neutral
- ✓ No protective clothing required
- ✓ No residues in eggs
- ✓ Resistance-proof – physical mode of action
- ✓ No waiting periods
- ✓ Approved for organic farming (FiBL-listed)
- ✓ EU Organic, Demeter, Bioland, Naturland
- ✓ Cost-efficient – 10L concentrate makes 70L
