

TECHNICAL DATA SHEET

reBAG – recycled bags

Characteristics	Description
Capacity [l]	120
Material	LDPE
Colour	Green / Yellow / Red / Black / Purple / Brown / White / Blue / Clear
Dimensions [cm]	70 × 105
Film thickness[μm]	24
Type of construction	Bags on a roll or cut to size in packs
Number of bags per unit [pcs]	25

Purpose: The bags are designed for the collection and temporary storage of waste as part of the separate collection scheme. The product is suitable for use both indoors and outdoors, in households, public buildings and in the service sector.

Characteristics	Description
Production	Made from durable LDPE film
Properties	Strong, flexible, moisture-resistant films
Use	Designed for standard containers 120L

Additional information: The product is made from 100% recycled LDPE. It is suitable for recycling and can be used for the separate collection of all main waste streams. The product must be disposed of in accordance with local regulations on plastic waste. Other dimensions, thicknesses and colours can be produced subject to verification of requirements.

The information provided is based on the best available knowledge and is intended to give general details about our product and its applications. Permissible dimensional tolerance: ±5%. Dimensions are given for the bag when unfolded. Due to the properties of LDPE film and the production process, natural dimensional variations within the specified tolerance are permitted. The nominal capacity of the bag is for practical purposes only and depends on how it is filled and sealed. It is the customer's responsibility to verify the bag's suitability for the intended application. The quality of the product is guaranteed in accordance with the General Terms and Conditions of Sale and/or the provisions of the sales contract.
