## The right one for everyone

SELITBLOC® Underlay for vinyl flooring is available in the thicknesses 1 mm and 1.5 mm with different surfaces.

Textile floorings must always be removed before laying. Laying on ceramic tiles, linoleum or wooden floors is possible to a limited extent, since the subsurface might show through. Please note the processing information of the floor producer.

# SELITBLOC®

# Why SELITBLOC®?

Protection and comfort for vinyl click flooring

## 1 Protects the floor

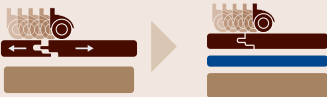

No damage caused by loading on uneven ground

Subsurface does not stand out

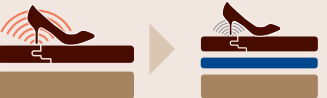

Protects under load and against sliding of floor boards

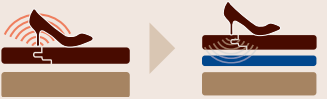

## 2 Improves living comfort

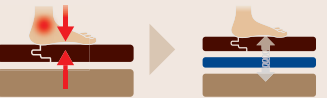

Reduces walking noise in room

Reduces impact sound in room below

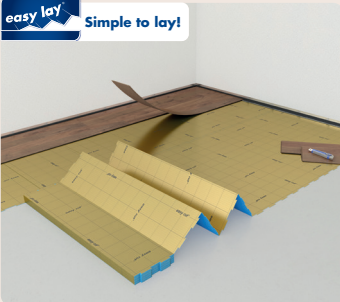

Shock-absorbing flooring structure

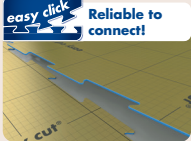

## 3 Ingeniously simple to process

easy lay Simple to lay!

easy click Reliable to connect!

\* only 1.5 mm GripTec®

easy cut Easy to cut!

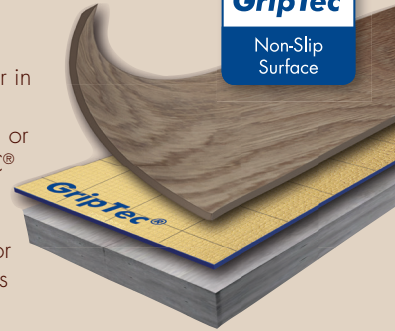

# What is GripTec®?

Protection against slipping and jointing

In order to hold the vinyl floor in place despite the horizontal forces working on it (walking or chair roller loads) SELITBLOC® has a particularly slip-resistant GripTec® surface. This counteracts the sliding of floor boards and protects the joints against damage.

## Application areas

For special requirements

Suitable for all floating vinyl flooring with clickfit system as well as:

### Kitchens & Bathrooms

The SELITBLOC® Underlay for floating vinyl flooring is resistant to moisture and therefore ideally suited for use in kitchens and bathrooms.

### Floor heating

The SELITBLOC® insulating underlay is especially suitable for floor heating. The low thermal resistance allows efficient transmission of the heat.

### Heavy load

The high compression strength and the unique GripTec® surface of the SELITBLOC® Underlay for floating vinyl flooring allows the vinyl floor to support heavy furniture and absorb an increased load.
