

CONDAPLAST

Refuse Sacks 100% Recycled

YOU CAN MAKE A DIFFERENCE
EVERY DAY IS EARTH DAY

WELCOME TO CONDAPLAST

A GREEN COMPANY

We are an innovative company founded in 1978 specializing in refuse sacks and drawstring refuse bags manufactured from 100% low density polyethylene (LDPE) recycled from high quality industrial packaging.

Beyond the manufacturing of refuse sacks, our company manages and controls the entire supply chain. We have our own washing and recycling plant, as well as an extrusion plant to produce the polyethylene film that we use for the manufacturing of refuse sacks. All this enables us to be one of the few companies in Europe that handles ALL PHASES OF THE PRODUCTION CYCLE of refuse sacks.

40 YEARS IN BUSINESS

As a creative and efficient company, we hire qualified, motivated and highly committed employees. Year by year we invest in cutting-edge technology and in the know-how available in international markets. As a result, we have a world-leading position in terms of the technological process related to recycling, extrusion and the manufacturing of refuse sacks.

Our wealth of experience allows us to offer our customers high quality and 100% ecological products, competitive prices and personalized service and attention.

GIVE PRICE STABILITY TO YOUR CUSTOMERS

We have a production capacity of up to 15,000 MT of polyethylene per year which we use to manufacture a significant number of private label bags that are sold mainly in international markets. Due to the production of our raw material, we are able to maintain competitive costs for our customers, regardless of fluctuations in prices of the petrochemical companies.

Therefore, if you are looking to make a more sustainable, high performance choice in refuse sacks, backed by an exceptional service and support, you will not find a stronger or greener option than Condaplast bags.

INTERNATIONAL MARKETS

- Retail / Private label
- Cash & Carry
