

LOTUS GLOBAL - BLUPAK - POLYBAGS

A polybag is a simple, welded, transparent plastic packaging mainly used in the textile industry. A cost-effective solution, the polybag is the perfect product for online retailers looking to protect their goods. They are also environmentally friendly due to their reusable and recyclable (up to 100%) properties. Another advantage of using polybags for your products is the incredibly quick production process. During the design process, you can add whatever image or statement you wish. This is an effective way to promote your brand and is useful for marketing purposes.
