

Mousetrap PRO SuperCat

Super-efficient and species-relevant trap eradicates mice through its no-fail catching system

- Patented **easy catch system**
- Optimal strike force
- Species-relevant, fast killing
- Prevents catching errors
- Includes natural bait

Our latest addition to the SuperCat range is this brilliant mousetrap with its ingenious **easy catch system** trigger mechanism and its powerful hammer-blow killing action. This new design kills mice instantly and humanely without them hurting themselves or for long.

Instructions

1. Push the lever down and remove the red protective cap from the bait. NOTE: The trap will not lock automatically if the protective cap is not removed.
2. Place the trap by a wall with its open end sideways to the wall (mice seldom wander into open spaces).
3. Hold the trap up and press the lever on the back to discharge the dead mouse simply and quickly without touching it.

Advantages

- * The natural bait is integrated into an elongated container in front of the trigger mechanism. As the mouse eats the bait, it gets used to the trap without setting it off, and as it continues to eat it is drawn close to the trigger and into the perfect position to be trapped.
- * The new patented trigger mechanism easy catch system with its inbuilt stability prevents the mouse from setting the trap off accidentally. Only when the mouse starts eating the bait and penetrates deeper into the trap does it lift the trigger device and set the trap off.
- * The hammer-blow force generated by the extremely high tension spring together with the powerful clamping action of the trap ensure that the killing process is shortened as appropriate to the species.
- * With the SuperCat Mousetrap PRO, Swissinno is launching onto the world market a new development that according to its findings already complies with future EU standards and is certified the highest Category 'A' classification according to Section 18 of the German Infection Protection Act.
