

sedus

get together

*Multifunctional team
and single desks*

Working together. Today and in the future.

Smart solutions for a new approach to work.

Greater mobility, flexibility and communication:

The way we work is changing more and more conspicuously. One reason is social change. New technological possibilities and more open social structures influence the way we interact with each other – and thus also how we collaborate.

Bench working, i.e., working together at a large desk, is a reflection of this development. Whether for temporary work (hot desking), situation-related use by project teams (smart working) or permanently assigned team workstations: Sedus *get together* provides a multifunctional bench solution which satisfies all the demands of the modern working environments – from temporary to permanent working at both single desks and bench workstations.

Focused on concentration.

Single workstations as flexible retreats.

New approaches to work are also changing the design of office landscapes.

Whilst floor plans are becoming ever more open, there is a growing need for retreats for concentrated working. The multifunctional single workstations which can be used temporarily by numerous employees offer an efficient solution.

The *get together* single desks were designed with exactly this in mind. They offer the same level of flexibility as the *get together* benches and can be individually configured with accessories for work place organisation. At the same time, they boast an appealing design and the version with wooden legs creates a truly homely feel.

A desk system as flexible as your team.

Easy to configure, quick to set up and convert.

Single desks for concentrated working.

Focused.

Use as a single desk for concentrated working or for fixed single desks, in this example with a depth of 800 mm and width of 1600 mm.

Work zones with permanent workstations.

Tried and tested.

get together in a classic application, in this sample configuration with a depth of 1600 mm and width of 3200 mm.

Surface-optimised group workstations.

Efficient.

Use in the central zone or country-specific work zones with space-optimised places, as in this configuration with a depth of 1400 mm and width of 4800 mm.

With *get together* flexibility is paramount.

Not only due to the large number of possible workplace configurations. The intelligent design, made up of the fewest parts possible, guarantees that you will be set up and ready to go in no time at all after reorganisations and relocations. As such, *get together* not only boosts productivity when working but also when setting up and reconfiguring.

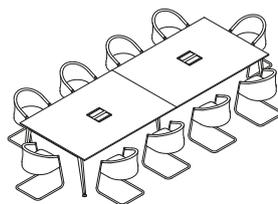

Project work and temporary working in the central zone.

Flexible.

Versatile use with space-optimised stations in the configuration shown with a depth of 1600 mm and width of 2400 mm.

Meeting rooms and zones.

Integrative.

Use as a meeting table with continuous desktop, in the example here with a depth of 1400 mm and width of 4000 mm.

Smart working doesn't get more intelligent.

Design *get together* in line with your wishes.

Depending on work requirements, available space or desired quality, with *get together*, group and team workplaces can be planned and realised as individually as is best for productivity and atmosphere. From the four configuration levels with an attractive price range to the practical accessories for individualisation and the user-friendly integration of data and power cables – *get together* is simply a clever answer to all the requirements of intelligent work.

Versatile.

The desktop is available as a one-part and two-part version. The two-part desktops enable customised electrification.

Useful.

All manner of accessories can be attached to the multifunctional rail without the need for tools. This allows you to make maximum use of the entire length of the desk.

Illuminating.

The workstation lamp "Ninety" can be moved and rotated in seconds.

Homely.

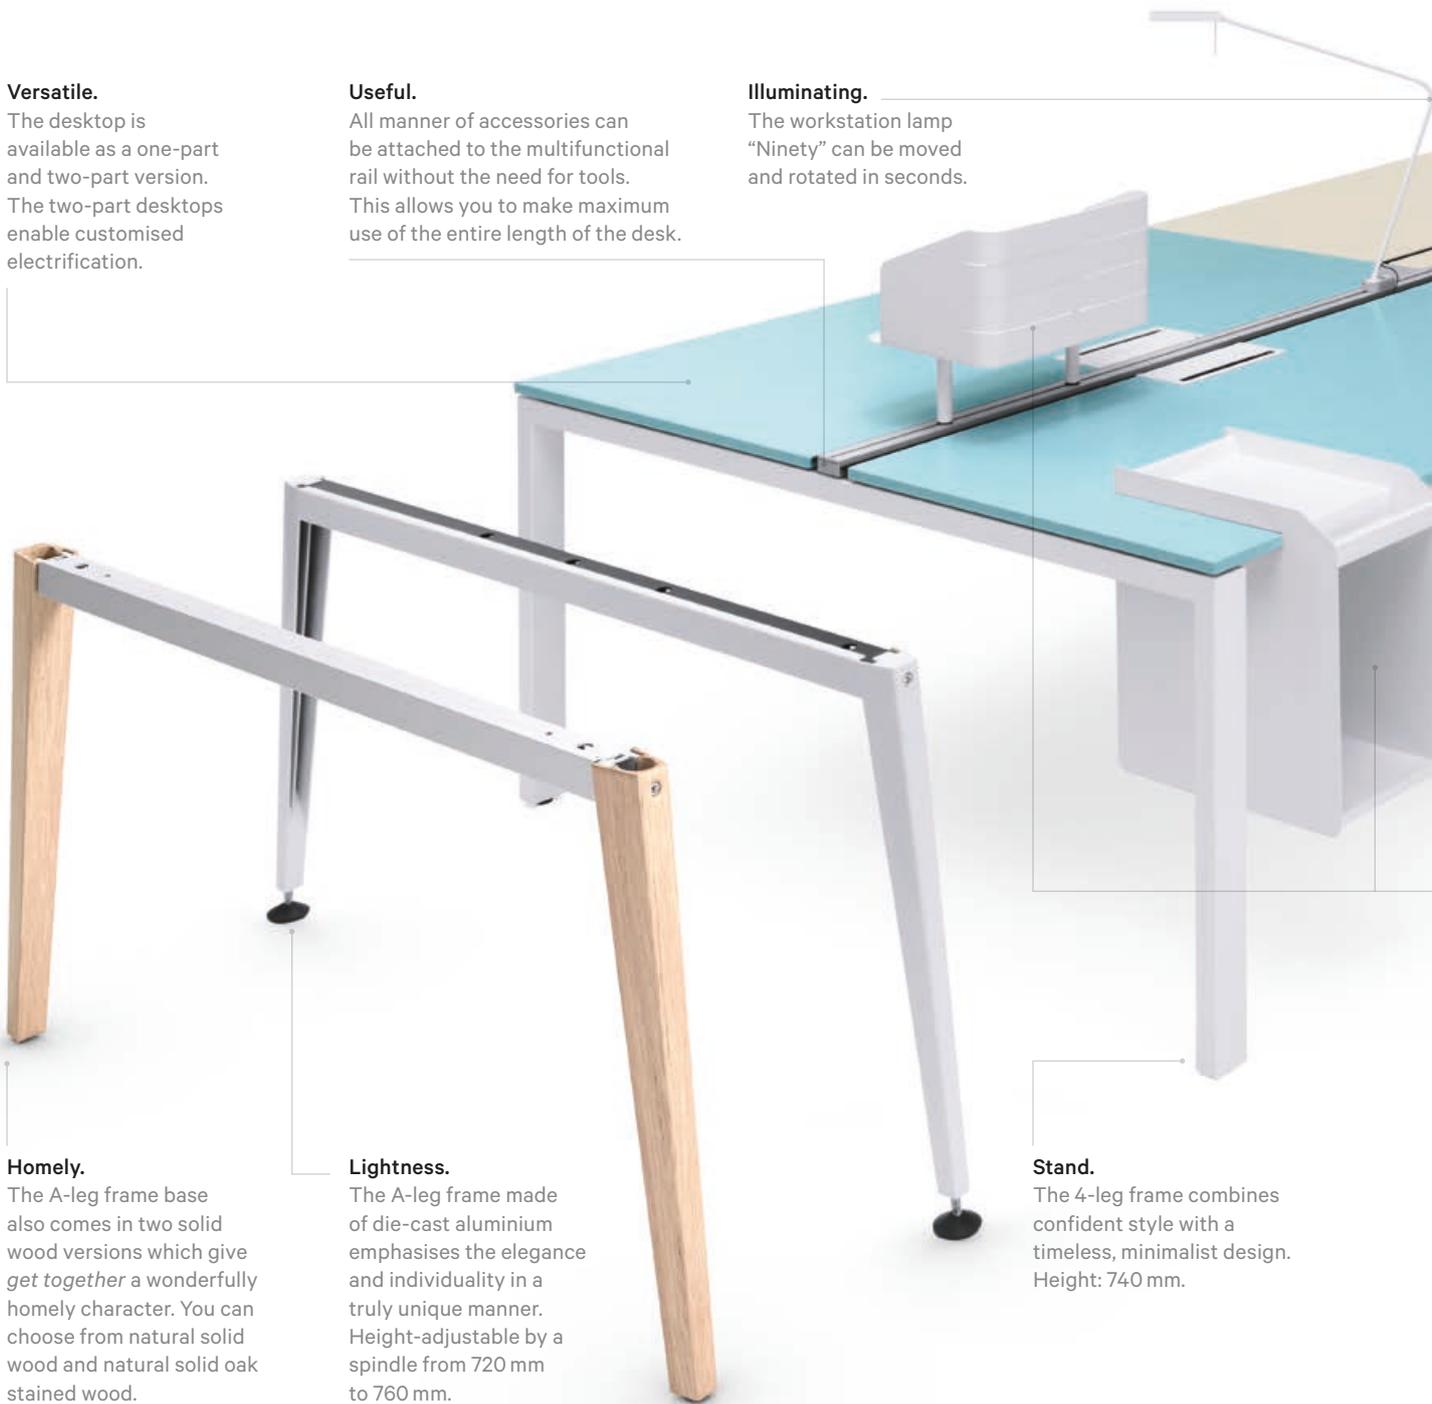

The A-leg frame base also comes in two solid wood versions which give *get together* a wonderfully homely character. You can choose from natural solid wood and natural solid oak stained wood.

Lightness.

The A-leg frame made of die-cast aluminium emphasises the elegance and individuality in a truly unique manner. Height-adjustable by a spindle from 720 mm to 760 mm.

Stand.

The 4-leg frame combines confident style with a timeless, minimalist design. Height: 740 mm.

Multifunctional screens

Personal space.

The magazine provides a screen element at the side and at the same time storage space for magazines and all kinds of personal items.

Undisturbed.

Whether as a rotating sail or large shell: The upholstered and movable screens provide privacy and yet still facilitate communication.

Multifunctional.

The shelf can be simply placed at the front end. It functions as a privacy screen and storage space. With its counter-like character it also serves as a contact point.

Clean.

The electrical connection panel thus provides enough space for bundled cable management and, in its fixed position, guarantees a tidy appearance, even under the desktop. For flexible vertical cable management an electrical connection unit and cable chains are optionally available.

Comfortable.

The large round grommets on the rear edge of the desk offer partial access to the cable tray.

Organiser and Smart Box

Practical.

With the Organiser your folders and personal items are always ready to hand. The person opposite profits too: the back serves as a magnet board.

Clever.

The smart box is suspended from the desktop and offers a note file, a pen tray and – in the “power” version – two socket modules as well.

Surfaces for legs

A-leg

Real wood

Aluminium

4-leg

Anodised / powdered

Greater convenience.

The electrification flaps run along the entire width of the desk to ensure optimal access to the cable tray.

A desk with personality.

Eye-catcher.

The melamine likewood oak offers the look and feel of a veneer and at the same time all the advantages of a melamine: durability and light fastness.

Wood is a natural product.

Every trunk and thus every veneer has its own unique character which is reflected in the distinct colours and structures. Natural variations are unavoidable and would prevent an exchange. The colour of the wood changes when exposed to light.

Tailored to your needs.

Practical accessories and dimensions.

With *get together* the focus is on success – right from the word go. During the development stage, great importance was attached to ensuring that *get together* is simple to plan and quick to assemble and reconfigure.

An intelligent crossbeam system with well-designed interfaces and the minimum possible number of components guarantees that you will be set up and ready to go in no time at all after reorganisations and relocations. As such, *get together* not only boosts productivity when working but also when setting up and reconfiguring.

Practical and personal.

The configuration and design of the individual workstations can be changed in next to no time with the versatile *get together* accessories.

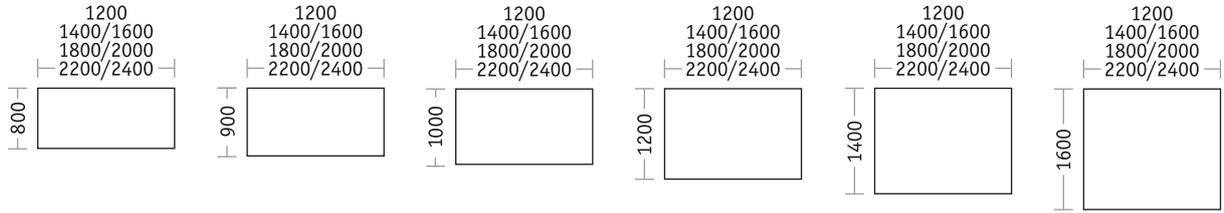

Whether shielding, organisation or customisation: all workstations can be planned to guarantee maximum well-being and thus, in turn, maximum motivation.

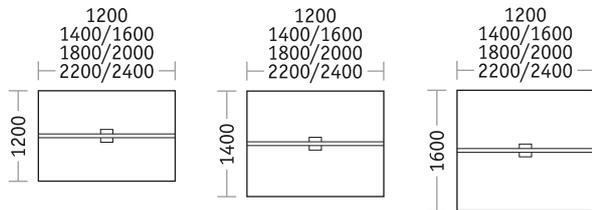

Simple and efficient.

Outstanding for humankind and the environment.

In its over 140-year-long history, sustainability has always played a central role at Sedus, even if this term didn't even exist back then. The responsible use of resources and respect and appreciation for staff have been engrained in our corporate culture since the word *go*. However, we have always been and remain sustainable due to the very fact that we produce high-quality products which result in tangible benefits. Products which help people and bring joy to their lives. Some of our chairs and desks have been in use by our customers for decades, which is perhaps the greatest kind of sustainability.

get together also reflects these values. Even during the development phase, the focus was clearly on customer benefits and the environmental footprint. For example, sustainable forestry in the vicinity of the production site provides the real wood veneers and timbers used. This is truly outstanding. Let's not forget the innovative machining such as seamless laser edging which reduces waste to a minimum. *get together* not only stands for the highest possible quality, but also gives a great feeling.
