Swivel and visitor chairs
swing up

One of a kind: Sedus swing up.

Weightless sitting. Without effort, without tension, without fatigue. Before there was the Sedus swing up it seemed an unattainable utopia. But now you can experience a completely new quality of sitting. Thanks to scientifically sound, innovative technologies, for the first time this new office chair allows exactly the natural sequence of movements that a person needs in order to feel good and stay healthy, to unfold and maintain their full potential. Sedus swing up – so perfect, as if you were floating.

Life is movement. Better sitting is too.

Sedus swing up was developed in a scientific cooperation with the TU Munich. Because to rethink sitting in the office you need to explore the complex interactions of people's bodies, minds and psyches. The result in a nutshell:

freedom of movement is the key. Just as you can see it in children, who still let their natural instinct to move run free. The functionality of an office chair must provide scope for the urge to move that evolution has deeply rooted in humans.

Seating quality that moves more. Sedus swing up brings more movement into the office – the basis for physical and mental well-being and thus greater productivity.

Technische Universität München

A completely new seating concept.

The body knows what it needs, Sedus swing up provides it. The new Similar-Swing mechanism also optimally absorbs the particularly important lateral hip and pelvic movements and promotes lively sitting.

Excellent technology that understands the body.

A person who moves not only feels more comfortable, they can also use their potential for performance better. Livelier sitting thus also means livelier thinking, working and communicating. What is essential is: movement must be able to happen, controlled autonomously by the body. Thanks to the dorsokinetic backrest, its

seat surface mounted so it can move in all directions and the powerful return springs, swing up actively responds to every movement of the body. It offers well-measured free spaces and completely adapts to the individual activity profile of its user.

Intuitive operation. All the important controls are positioned within easy reach, they feature clear symbols and are pleasant to the touch.

3D adjustable armrests. The depth and width can be individually adjusted by simply pushing the rest, the height is changed at the push of a button.

Lean back and relax. The headrest with adjustable height and tilt takes the strain off the muscles and promotes a sense of well-being.

Customised seat tilt. The seat tilt adjustment of 4° allows both a seat tilt which is adapted to your personal needs and permanent contact with the back rest – even when leaning back.

Perfect seat depth. The seat depth of 410 mm can be increased by 50 mm without changing the seat hollow. In brief: Ultimate conditions for active sitting for users of virtually all shapes and sizes.

Natural freedom of movement. The combination of proven Sedus technologies and the patented new Similar-Swing mechanism allows frequent change of posture with unique harmonious sequences of movement. The chair supports the body in any situation, without dominating it.

Adjustable lumbar support. The curved lumbar support can be individually set for optimal adjustment to the contours of the back.

Height adjustment. The height of the backrest can be set to suit any user's height and weight and guarantees optimal pressure distribution on the back.

Ideally sprung. The patented "Sedo-Lift" mechanism which comes with a 30-year guarantee prevents straining of the spinal column – regardless of the selected seat height.

Natural sitting. Naturally with a concept.

swing up impresses with its harmonious overall concept. Tangible and visible – in all members of the swing up family and in the most diverse applications. Whether as an office swivel chair, conference swivel chair, cantilever or 4-leg model, swing up promotes a new and natural way

of sitting. At the desk, in meetings and wherever visitors should enjoy a better sitting experience. With a variety of colours and features to enable a customised solution to be achieved for every office. For productive well-being in every single situation and in every single position.

Maximum comfort. Membrane covering, membrane with flat cushion or full upholstery – all the swing up backrests impress as a result of their outstanding sitting comfort, with which Sedus has become synonymous.

Guided by your body. And your style.

Sedus swing up delights at first glance. Because its designer has managed to create a dynamic office chair that confidently shows its exceptional ergonomic qualities. The secret here: the elaborate technology does not impose itself in the foreground, but blends harmoniously into the attractive overall appearance. The timeless elegance of the design, combined with high quality materials, brings another crucial criterion for well-being to the office: your style. A perfect example of modern office design that was honoured not once but twice in 2014, with the German Design Award and the red dot award.

Clear-cut design. The unmistakable lines in all swing up models emphasise the dynamism and movement of this range.

Sustainability down to the last detail.

At Sedus, sustainability and quality “Made in Germany” have formed part of our key corporate principles for more than 50 years. Principles which are united in Sedus swing up and which are reflected in its recycling-oriented product design, ecologically tested materials, resource-efficient manufacturing demonstrating energy awareness and ongoing quality tests.

For example, instead of a conventional paint finish, a solvent-free powder coating is used on swing up. State-of-the-art and extremely environmentally friendly electroplating, in which all production residues containing metal are recycled, is also part of Sedus’ quality and sustainability philosophy.

Company:

Around the world, Sedus adheres to the principles of the UN Global Compact for human rights, labour standards, the environment and anti-corruption.

Fabrics which last longer. Exemplary when it comes to tear strength, chemical resistance and light fastness.

Local leather. First-class quality and short transport routes – all the leather we use comes from Southern Germany and Austria.

Powder coating instead of a paint finish. The more environmentally friendly and higher quality solution for finishing and corrosion protection.

Chrome which shines bright for the environment. We also have a water treatment plant which filters production residues.
