Our strong belief is that protecting the environment is not only a trend but a moral obligation, which is why viGO! is introducing technological solutions and developing business strategies aiming **TO MINIMIZE OUR NEGATIVE IMPACT ON THE ENVIRONMENT.**

ECOLOGY THROUGH THE EYES OF CONSUMERS

CONSUMER ENVIRONMENTAL AWARENESS

86% of consumers in Europe believe that the main problem of modern society is environmental issues.

MAIN THREAT

Plastic is a major source of concern for **70%** of European consumers.

CONSUMERS ARE LOOKING FOR ECO PRODUCTS

62% of European consumers are willing to pay more for products that use less plastic.

viGO! ECOLOGICAL DEVELOPMENT STRATEGY

Our commitment to environmental issues has been recognized by international certification agencies awarding prestigious accreditations.

viGO! ECOLOGICAL DEVELOPMENT STRATEGY

EuCertPlast

QuickPack Poland is **one of only a few recyclers in the country** that has EuCertPlast accreditation – a certification process that complies with the European standard EN 15343

An independent certification body appreciated our **technology of processing foil waste** into regranulate, as well as the **procedures related to the maintenance and quality control** of garbage bags made of it.

viGO! ECOLOGICAL DEVELOPMENT STRATEGY

The Blue Angel (Blauer Engel) certificate is **one of the oldest and most recognizable ecological signs**.

The certification process involves an independent panel of judges, which carries out a detailed analysis of all stages of processing raw materials and production of goods, assessing them in terms of **minimizing harmful effects on the environment**.

The certificate is awarded to goods and services that stand out among other products and projects of the same type, recognized as **environmental champions**. For consumers who care about the well-being of the planet and are consciously looking for environmentally friendly solutions, this is a sign that they have made the right choice.

vIGO! ECOLOGICAL DEVELOPMENT STRATEGY

The FSC certificate is now considered **the most reliable** among the existing **forest certification systems** in the world. It sets an international standard for **responsible forest management**, taking into account social, ecological and economic aspects.

The chain of origin of the product is verified during the certification process. This means that in order for the final product to be sold as certified, **the FSC rules and standards must be observed at every stage of raw material extraction and processing**. Only then is it possible to label the final product with the FSC label.

The control of the FSC product chain of origin covers all stages of the end product formation cycle i.e. sourcing, processing, trade and distribution.

viGO! ECOLOGICAL DEVELOPMENT STRATEGY

INNOVATIVE LINE OF ECO-FRIENDLY WASTE BAGS

100% RECYCLED MATERIAL

The current, very strong ecological trend is the main determinant for us when creating new products. That is why we introduce garbage bags made of 100% recycled plastic into our range. For their production, we use raw material recovered in our own polyethylene film processing plants, which makes us a fully independent and important element in the chain of the so-called closed circuit.

PACKAGING OF CERTIFIED RECYCLED PAPER

In accordance with our philosophy, in order for the product to be fully ecological, its packaging, both consumer and transport, must meet the highest quality standards and at the same time come from controlled sources. Therefore, for the production of labels and cartons of our bags, we use FSC certified paper – the most reliable system of certification of forest resources.

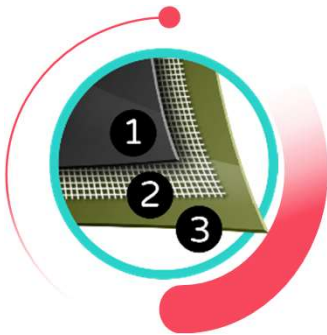

INNOVATIVE LINE OF ECO-FRIENDLY WASTE BAGS

UNWINDING WITHOUT TEARING

In response to information from consumers that it is inconvenient for them to tear off bags with perforation, we have introduced bags with a unique interleave system into our offer.

Thanks to it, it is enough to unscrew one bag after another-without having to tear them apart.

THINNER AND STRONGER 3-PLY FILM

Following market trends, we have introduced bags manufactured in the new 3-layer film technology.

The 3-layer technology makes it possible to produce bags **thinner and lighter**, which are at the same time **much stronger and more flexible** than their counterparts made of classic 1-layer film.

In addition, bags produced in 3-layer technology **can have 2 colors-a different color of the inner and outer layers**. This effect can only be achieved if multilayer film technology is used.

INNOVATIVE LINE OF ECO-FRIENDLY WASTE BAGS

ULTRA-ELASTIC EMBOSSED FILM

As a promoter of market innovations, last year we purchased a modern machine that allows us to produce bags in a new, innovative technology of embossed foil.

Bags made of embossed film have **significantly increased flexibility**, which provides increased **resistance to stretching and abrasion**.

Thanks to the use of the above technology, we are able to produce much thinner and lighter bags from 100% recycled material, which have mechanical properties superior to their classic 1-layer and 3-layer counterparts.

At the same time, bags with embossing are well-known products for consumers in a new version. Attractive, embossed 3D pattern is a novelty that was not previously available in this category.

Division due to the bag closing system

wavetop

1. Simple closing system.
2. Optimal use of bag capacity.
3. The binding makes it easier to carry the filled bag.
4. Star weld to match round baskets.

with
drawstrings

1. Convenient closing system.
2. Maximum use of bag capacity.
3. The strap makes it easy to tie and carry the filled bag.
4. Side weld (stronger bottom).
5. Various colors of tape.

with
handle

1. Intuitive closing system.
2. Good use of bag capacity.
3. The ears will make it easier to carry the filled bag.
4. Star weld matched to round baskets.

standard

1. No locking system.
2. Bag capacity underutilized.
3. Star weld fitted to the bottom of the basket.

NEW LINE OF ECOLOGICAL SEGREGATION BAGS

DESIGNED FOR SEGREGATION

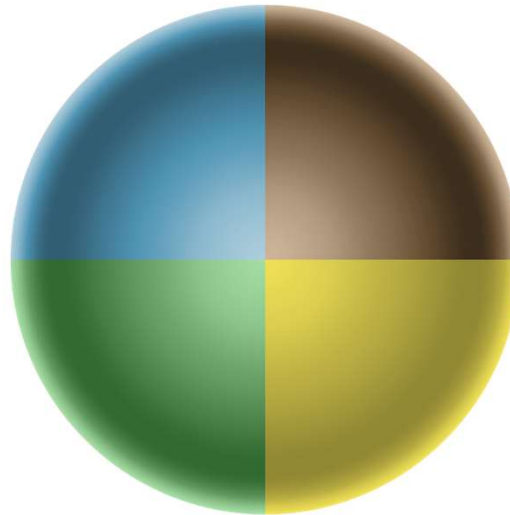

All bags from the line have the appropriate color of the film in accordance with the applicable rules of selective collection of municipal waste:

Green bags are designed for both white and colored glass.

Blue bags are dedicated to paper.

Brown bags are intended for organic waste.

Yellow bags are used to segregate plastics and metals.

PERFECT CLEANING

viGO! ECO Garbage bags LD w/o closing segregation

CODE	NAME	PIECES PER CARTON	EAN CODE
7721560	viGO! ECO Garbage bags LD w/o closing segregation brown 35 L 15 pcs	28	5902841472686

- Convenient to use and environmentally friendly
- The LDPE film they are made of can be reprocessed (excluding tape)
- FSC certified paper was used for the production of labels and cartons of our bags
- Manufactured in technology of 3-layer embossed film, which allows the production of thinner and lighter bags, which at the same time are much stronger and more flexible and have increased resistance to stretching and abrasion
- Unique interleave system. Thanks to it, it is enough to unwind one bag after another – without having to tear them apart
- Bag labels have a system to facilitate their quick and hassle-free opening - a special ribbon
- Bags with a distinctive, unique fragrance - **lemon**
