

## Web Offset Heatset

### UNI 500

**UNI 500** ink series can be used universally on a wide range of different paper grades. The spectrum of substrates that can be printed ranges from newsprint and SC papers to LWC qualities and other coated substrates. **UNI 500** is characterised by excellent printing stability and outstanding running properties in print production.

The tack (tack value) of **UNI 500** is deliberately set at a low level so that even pick-sensitive papers can be processed without any problems. By using **UNI 500**, disruptive effects such as build-up on the blanket and printing plate can be avoided as far as possible, even when using critical substrates.

For printing jobs on high-quality coated papers, where particularly high gloss, low dot gain and the best possible contrast are important, we recommend the use of our **MG 1800** ink series, which was specially developed for this application.

**UNI 500** ink series fulfils all requirements for the award criteria of the new 'Blue Angel for printing inks, inks and toners for paper and cardboard on professional printing machines' (DE-UZ 237, July 2024 edition) up to a minimum paper weight of 40 g/m<sup>2</sup> and the 'Blue Angel for printed products' (DE-UZ 195, January 2021 edition).

#### Particular properties:

- Fast drying
- - High gloss
- - Excellent running properties
- - Excellent transfer and colour acceptance behaviour (trapping)
- - Colour locations according to DIN ISO 2846-1 and ISO 12647-2
- - Optimum print stability
- - Formulated with low-aromatic mineral oils
