Manufacturer of Polyamide Fibres (Company):

Declaration made as a manufacturer of monomers for the company:

for the following products:

1 Manufacture

The emissions to air of N₂O during monomer production, expressed as an annual average, shall not exceed 9 g per kg of polyamide-6 fibre produced and 9 g per kg of polyamide-6.6 fibre produced. This requires the use of abatement techniques in the caprolactam and adipic acid production. It must be made sure that the abatement efficiency for N₂O emissions from adipic acid production is least 95 percent.

We hereby confirm compliance with the requirement. Attached hereto is a test report for raw gas and pure gas showing that an abatement of at least 95% is achieved.
