Manufacturer of Polyester Fibres (Company):

Declaration made as a manufacturer of polyester fibres for the company:

for the following products:

Products made out of polyester must comply with subcriterion a) as well as either of b) or c)

a) Antimony

The polyester fibres are antimony-free.

The level of antimony in the polyester fibres is less than 260 mg/kg.

Attached hereto is a test report. Testing is conducted using the following test method: direct determination by atomic absorption spectrometry. The test is performed on the raw fibre prior to wet processing. Leaching according to DIN EN ISO 105-E04 / ISO 17294-2 (ICP/MS).

b) Fibres must be produced using a minimum content of PET that has been recycled from production and/or consumer waste.

Staple fibres contain a minimum of 50 % recycled fibres and filament fibres contain at least 20% recycled fibres. This requirement does not apply to microfibres, which must comply with sub-criterion c).

c) Volatile Organic Compounds

The emissions of volatile organic compounds (VOC) in the sense of the Industrial Emissions Directive (2010/75/EU) during the polymerisation of polyester and during the production of polyester fibres, measured in process stages during which they occur (including volatile emissions), expressed as an annual average, exceed not 1.2 g/kg for PET chips, 10.3 g/kg for filament fibres or 0.2 g/kg for produced polyester resin.

We hereby confirm compliance with the requirement. Attached hereto is a test report according to DIN EN 12619 evidencing that this criterion is met.
